

Joel Cribby

104-1236 Pandora Ave, Victoria BC, V8V 3R4 | 778-677-9799 | joelcribby@gmail.com

Objective

Passionate and dedicated Software Developer with a history in Web Application Design and DevOps system management. Quick learner that excels in fast-paced environments that require diligent attention to detail and a focus on providing efficient solutions to new challenges. Experienced in the Agile development lifecycle and capable of owning a project and seeing it through to completion.

Education

UNIVERSITY OF VICTORIA

- Degree: Bachelor of Science, Computer Science
- Date Completed: January 2020

Skills & Abilities

RELEVANT SKILLS

- Strong understanding of CI/CD and DevOps systems
- Fundamental understanding of database systems and queries using SQL
- Skilled in use of Windows dev environment tools such as Visual Studio, IIS and SSMS
- Well versed in Agile Development

ADDITIONAL SKILLS

- Proficient in the development of RESTful APIs as well as the Angular framework
- Capable of working both independently and in a team
- Proficient in the use of object-oriented programming
- Excellent knowledge of C#, HTML and CSS

Experience

SOFTWARE DEVELOPER | ENCOREFX | JAN 2020 – MAR 2020

- Managed and implemented DevOps improvements and maintenance with the objective of streamlining development systems and increasing efficiency.
- Utilized Gitlab CI/CD and IIS to design and coordinate web application deployments to various build environments.
- Responsible for researching and introducing new methods for increasing productivity and reducing build times.
- Implemented a shared cache server for runners using MinIO object storage and Docker to allow for faster downloading of pipeline artifacts.
- Introduced automated semantic versioning of all projects to allow for quicker and easier release note generation.
- Handled all DevOps related refactorization when migrating from a monolithic code base to a microservice structure.
- Led an initiative to consolidate all CI related YAML files into a shared script storage.

SOFTWARE DEVELOPER INTERN | ENCOREFX | MAY 2019 – SEP 2019

- Developed features and tests for a web application across the entire stack.
- Utilized the Angular framework ecosystem to introduce and develop test-driven features.
- Researched and implemented new infrastructure improvements and presented findings to the team and stakeholders.
- Designed reactive and user-friendly web page components using HTML and CSS
- Introduced fixtures for testing new features using unit testing and Selenium automated testing development methodologies.
- Improved upon and generated new SQL queries using Entity framework and SMSS for interacting with the 3rd party database.

SOFTWARE DEVELOPER CO-OP | AML OCEANOGRAPHIC LTD. | APR 2018 – JAN 2019

- Worked independently as the sole on-site software developer for AML with the objective of developing, updating, and designing company software using MVVM framework.
- Developed and designed an application using C# and XML.
- Contributed to user experience decisions as well as helped maintain the project management workflow.
- Implemented multiple third-party APIs for data visualization including Telerik and Google Maps
- Worked to implement Wi-Fi and Bluetooth connectivity between hardware and software.
- Utilized Atlassian products such as JIRA for project management and user story generation.

Personal Projects

WEB PORTFOLIO | JOELCRIBBY.COM

- Written using HTML, CSS, and JavaScript
- My web portfolio serves as a showcase of my skills in web design as well as a place to host my previous work and updates on my professional life.
- The project is fully automated using GitHub actions. Issue branch generation and deployments to AWS are handled using workflows.
- GitHub Projects is used for project management and is connected to the relevant CI/CD workflows.
